

# CPR E 548: Cyber-Physical Systems Networking

## Frequently Asked Questions

1. I wondered if you could tell me how the hands-on projects and team interaction will be structured for the distance-learning students in the online section of the course?

The hands on projects will most likely be based on the open-source 5G wireless innovation platforms such as [OpenAirInterface \(OAI\)](#), and students can work on it with the state of the art open-field testbeds such as [Powder](#). We will use online learning and meeting tools such as Canvas and Webex for team interaction. If you may have any suggestions on these topics and the course in general, I would love to hear from you too.

2. How can online students participate in quizzes?

Quizzes will be executed via Canvas as timed quizzes. Students just need to use Canvas to complete the quizzes online.
